

Firefighter Rehab

Criteria For Release From Rehab

- Heart rate < 100
- Tympanic temp < 99° F
- SpO2 . 94%
- RR < 24
- CO level < 10
- SBP 100-160
- DBP < 100
- Some sweating
- No headache, N/V, chest pain or difficulty breathing

Criteria For Medical Treatment

- SBP < 100
- SpO2 < 94%
- RR . 30
- HR < 60
- Tympanic / oral temp 101° - 104° F
- CO level 10-20 without altered mental status
- Dizziness / weakness
- Shortness of breath
- Nausea or vomiting

Criteria For Transport To Hospital

- CO > 20
- Pregnant with CO > 5
- SBP < 80
- RR > 30 after 20 minutes on O2
- Tympanic / oral temp > 104° F
- Syncope
- Altered mental status
- Chest pain
- Dry skin
- Sustained nausea / vomiting
- Seizures
- Respiratory distress
- Sustained shortness of breath after 20 minutes

EMT

Medical Monitoring

- Fluids / Hydration – 24 oz water + 8 oz sports drink / hour
- Calorie Replacement
 - 30-60 g carbohydrates / hour
- Cooling Measures
- Apply cardiac monitor, if indicated
- Reassess after 20 minutes
- Follow General Medical Care Guideline, as indicated

Paramedic

Firefighter Assessment on Entering Rehab

- Assess 6 vital signs—BP, HR RR, SpO2, tympanic temp, CO level (if available)
- Blood glucose—check if FF is diabetic, or has altered mental status, headache, or weakness / dizziness
- Ask FF medical history and meds
- Assess complaints
- End tidal CO2—If the FF has respiratory complaints / difficulty breathing or altered mental status

Medical Treatment

- 12 Lead EKG – if chest pain, CO > 10, altered mental status, respiratory distress, syncope, history of cardiac disease
- Urine dipstick, if available
- IV hydration as indicated
- Cooling measures as indicated
